Description: The Controller accepts two analog/digital signal inputs and eight universal signal inputs. The control can be networked to a CANopen® or a Modbus TCP/IP fieldbus. Two +5V, 100 mA references are available to power sensor inputs. A rugged power supply interface accepts 12 Vdc or 24 Vdc nominal for battery powered machine applications. LED's indicate operational status. The enclosure is DIN rail mount. It operates from -40 to 85°C (-40 to 185°F). Standard embedded software is provided. The sophisticated control algorithms allow the user to program the controller for a wide range of applications without the need for custom software.
