2 Analog, Digital, Frequency or PWM Signal Outputs
+5V reference (50 mA)
Isolated CANopen®
Developed with Simulink®

P/N: AX130521

Description: The dual channel universal signal converter accepts two voltage, current, resistive, frequency, RPM, PWM or digital control signal inputs and converts them into two signal outputs (analog voltage, analog current or digital signal). The control can be networked to a CANopen® networked control system.

The unit has isolation between power and CAN.

Using the Axiomatic Electronic Assistant programming tool, the user can select the desired inputs from the following signal options:

- 0-5 V, 0-10 Vdc
- 4-20 mA, 0-20 mA or 0-200 mA
- 20 Ohms to 250 kOhm
- Frequency/RPM
- PWM
- or Digital (Active High or Active Low)

A +5V, 50 mA reference is available to power a sensor input.

The outputs can also be programmed as 0-5 Vdc, 0-10 Vdc, 0-20 mA, 4-20 mA, Frequency, RPM, PWM or digital on/off signals.

A rugged power supply interface accepts 12 Vdc or 24 Vdc nominal for battery powered machine applications. The unit carries an IP67 rating. The rugged enclosure with an integral, TE Deutsch equivalent 12-pin connector is suitable for harsh environments. It operates from -40 to 85°C (-40 to 185°F).

Applications:
- Power gen set engine control systems.
- Oil and gas equipment automation.
- Off-highway machine automation.

Installation	For mounting information, refer to the dimensional drawing. Mounting holes sized for ¼ inch or M6 bolts. The bolt length will be determined by the end-user's mounting plate thickness. The mounting flange of the controller is 0.63 inches (16 mm) thick. If the module is mounted without an enclosure, it should be mounted vertically with connectors facing left and right to reduce likelihood of moisture entry. The CAN wiring is considered intrinsically safe. The power wires are not considered intrinsically safe and so in hazardous locations, they need to be located in conduit or conduit trays at all times. The module must be mounted in an enclosure in hazardous locations for this purpose. No wire or cable harness should exceed 30 meters in length. The power input wiring should be limited to 10 meters. All field wiring should be suitable for the operating temperature range. Install the unit with appropriate space available for servicing and for adequate wire harness access (6 inches or 15 cm) and strain relief (12 inches or 30 cm).
