Description

CAN to 1 Signal Output Controller accepts power supply voltages from 9 to 36 VDC.

Versatile control algorithms/ function blocks allow the user to configure the controller for a wide range of applications without the need for custom firmware. All logical function blocks on the unit are inherently independent from one another but can be configured to interact with each other. All parameters are configurable using Axiomatic Electronic Assistant.

The hardware design allows for the controller to have a wide range of output types: Current, Voltage, and PWM.

It can operate at standard 250 kbit/s and 500 kbit/s and non-standard 667 kbit/s and 1 Mbit/s baud rates. The required baud rate is detected automatically upon connection to J1939 CAN network.
